- [Done] must have a web interface that allows new voter registration, checking of existing registration status given voter personal identifying information (PII), and updating of existing registration given voter PII
- [Done] must have a web interface that allows election officials to perform maintenance tasks on the registration database (e.g. update registration status based on whether the voter voted in the last election, list registered voters matching sets of parameters, display identification document/signature for a registered voter, etc.)
- [Done] must store, for each voter: full name, address, date of birth, identification information (e.g., digitized signature, copy of identification document, etc.), registration status (e.g., active, inactive), time of original registration, and time of last update to registration
- [Done] should be trivial to use for non-technical users
- [Done] should incorporate all appropriate web usability design principles
- [Done] should be able to handle upload and storage of photo ID images
- [Done] plain HTML & CSS Pages
